Product Guide Overview

The Virtual Capture channel utilizes the Bootstrap Framework which provides institutions advanced styling capabilities to customize an applicant's experience. This guide provides an overview of the most popular elements that can be styled (such as button color and navigation bar font size) as well as examples.

IMPORTANT: Less CSS is used to customize the Virtual Capture site. A technical resource with knowledge of HTML and CSS should be responsible for making these changes for a financial institution.

Target Audience

IT Resource

This guide provides an IT resource an overview of how to customize the style of the Virtual Capture website. This guide assumes the reader has knowledge of HTML and CSS.

Getting Started

To dynamically customize the style of the Virtual Capture channel, a less file must be used. The title of the file must be **custom.variables.less**, and it must be saved at the below file location:

DMZ Services\Akcelerant.Origination.Web.DMZ\custom\css

Styling Formula

The format required to update an element of the web application is:

@VariableName: Value;

Component	Description
@	Indicates the following text as a variable.
VariableName	Indicates the name of the variable being modified such as the company Brand, a Button or a Table.
Value	The value that the variable is being set to. NOTE: Adding a space prior to the property value is recommended to increase readability.
;	Indicate the end of the statement by using a semicolon.

For example, to change the primary brand color using a hexadeciml color, the formula would be
 @brand-primary: #046010;

Common Customization

This section reviews the most common style customizations that can be made through the `custom.variables.less` file. In addition to the common customizations in this section, a list of all of the available less variables can be accessed at <http://getbootstrap.com/customize/#less-variables-section>.

NOTE: All less variables in the above link are available to be used in the `custom.variables.less` file; however, not all of them may be used in Virtual Capture.

Primary Color of Virtual Capture Site

To change the Primary color of the Virtual Capture site the **@brand-primary** variable is used. Changing the primary brand color makes alterations throughout the entire Virtual Capture site. This changes items such as primary buttons background and the text on primary links that are not currently selected.

For example, changing the Virtual Capture primary color to a shade of green can be accomplished through the below:

@brand-primary: #046010;

NOTE: The Product Selection page appears differently depending on the active module(s) for an institution. The image below displays an example of the Product Selection page when both the Account and Loan Origination modules are active for an institution.

The screenshot shows a product selection interface for a financial institution. At the top, there are navigation links for 'Accounts' and 'Loan'. Below these are 'Product Offerings' and 'Join Now!' buttons. A shopping cart icon indicates '0 products'. On the right, a large green 'Apply Now!' button is visible. The main content area features three product cards:

- Money Market**: Features a green piggy bank icon. Description: Set aside funds in a money market account. This money market helps you earn interest while also giving you access to your funds. Call-to-action: Click here to learn about some of the great features of our money market account. Action button: Select.
- Basic Savings**: Features a blue piggy bank icon. Description: We are here 24/7 when you need us. Temenos Financial savings accounts are fee-free, federally insured and easy to manage. Start off with our basic savings plan, and watch \$5 grow into a new car, or your first home. Call-to-action: Click here to learn more. Action buttons: -, 0, +.
- Basic Checking**: Features a green pen writing on a notepad icon. Description: We are here 24/7 when you need us. This account puts more cashing towards your bling. There is no flat fee to use overdraft - you only need to pay interest if the account balance drops below zero and triggers use of an Overdraft Line of Credit. Call-to-action: Click here to learn more. Action buttons: -, 0, +.

At the bottom of the page, there is a copyright notice: © 2017 Temenos Financial. All rights reserved. Links to Terms & Conditions, Privacy, Security, About Us, Contact Us, and Site Map. A 'Need assistance?' link leads to live chat support.

Navigation Bar

The navigation bar can be modified by using two variables (**nav-link** and **navbar-inverse**) as well as many different attributes. The **navbar-inverse** variable affects the top Virtual Capture navigation bar, and the **nav-link** variable affects the Product Sub-Category buttons. The most notable attributes are as follows:

Variable and full

@navbar-inverse-bg Changes the background color of the top navigation bar.

@navbar-inverse-link-color Changes the font color in the top navigation bar.

@navbar-inverse-link-active-color Changes the font color of a navigation bar link after it has been selected.

-hover-color Changes the font color of the navigation bar links when hovering over them.

Buttons

There are multiple buttons that can be edited throughout the Virtual Capture channel. When a button's style is modified, the below aspects of the button are affected:

- Button Display - How the button appears by default.
- On Hover - How the button appears when the mouse is hovering over it.
- On Focus - How the button appears while being clicked.
- On Active - How the button appears after it has been clicked.
- Disabled - How the button appears when it is disabled.

Primary Buttons

Primary buttons are the main button displayed on a screen or panel, such as buttons that appear to select a product within the Product Selection page, or the button to start the new application process.

NOTE: If the Primary brand color has been changed, the primary buttons also change. That can be overridden by specifying changes to the button itself.

@btn-primary is the variable used to control the primary buttons. Common modifications made to primary buttons are as follows:

Attribute and Full Format	Description
-color @btn-primary-color	Changes the color of the text within primary buttons. The default color of primary buttons is white.
-bg @btn-primary-bg	Changes the background color of the primary buttons. The default background color is the Brand's primary color.
-border @btn-primary-border	Changes the border color of the primary buttons.

Default Buttons

Default buttons are displayed on a screen or panel, such as the Save, Previous, and Print buttons that display when selecting a product.

@btn-default is the variable used to control the default buttons. Common modifications made to default buttons are as follows:

Attribute and Full Format	Description
-color @btn-default-color	Changes the color for the text within default buttons.
-bg @btn-default-bg	Changes the background color of the default buttons.
-border @btn-default-border	Changes the border color of the default buttons.

NOTE: All buttons can be controlled using the **@btn** variable. A common alteration made to all buttons is adjusting the font weight **@btn-font-weight** to define the thickness of characters. The font weight is set through values incremented by hundreds such as 100, 200, 400 and 700. Normal font is considered 400 in weight whereas bold is 700 (**@btn-font-weight: 700**).

Panels

Panels can be customized to change the look and feel of the Virtual Capture channel. The **@panel-default** variable modifies all panels throughout Virtual Capture.

The screenshot shows a 'Primary Applicant' panel with the following fields:

- TIN: [Input Field]
- Account Number: [Input Field]
- First Name: [Input Field]
- Middle Name: [Input Field]
- Last Name: [Input Field]
- Birth Date: [Input Field]
- Current Address Line 1: [Input Field]
- Current Address Line 2: [Input Field]
- Additional Address Status: [Dropdown]
- Current Address City: [Input Field]
- Current Address Postal Code: [Input Field]
- Current Address State: [Input Field]

There are three default panel attributes that can be changed through the use of the **custom.variables.less** file.

Attribute and Full Format	Description
-border @panel-default-border	Changes the border color of a panel.
-heading-bg @panel-default-heading-bg	Changes the background color of a panel.

-text	Changes the color of the text within the panel.
@panel-default-text	

Input Fields

In addition to customizing the text and background within a panel, fields that are used to collect data can be modified as well. Using the **@input** variable can change the attributes of an input field.

NOTE: Input fields that are read-only and drop-down lists are also altered when the **@input** variable is used.

Attribute and Full Format	Description
-border	Changes the border of the input box.
@input-border	
-bg	Changes the background color of an input field.
@input-bg	
-bg-disabled	Changes the background color of fields that are disabled such as read-only fields.
@input-bg-disabled	
-color	Changes the color of the text that is entered into the field.
input-color	

Simple Grids

Simple grids are panels within screens that use tables to display data such as the Application Listing panel available through the User link in the navigation bar.

Applications	Application #	Applied For	Date Created	Status
	2043	Checking	6/11/2015	In Progress
	2042	Checking	6/11/2015	In Progress
	2039	Automobile	6/11/2015	In Progress
	2038	MasterCard	6/11/2015	In Progress
	2035	Checking	6/11/2015	In Progress
	2034	Savings	6/11/2015	In Progress

Attribute and Full Format	Description

-border-color	Changes the border color of the simple grid.
@table-border-color	
-header-bg	Changes the background color of the simple grid's header.
@table-header-bg	
-header-color @table-header-color	Changes the color of the text in the header.

Appendix: Revision History

Version	Date	Description	Release/Update
2.0	07/06/2017	Updated the guide to reflect the enhancements made to the Virtual Capture interface for the 16.05 release.	16.05
1.0	06/25/2015	Creation of the Style Guide	15.01.00
